## COMMERCIAL APPLES

## 1976 PRODUCTION BY VARIETIES

The August 1 forecast of the Nation's 1976 commercial apple crop is 6.2 billion pounds. This is 13 percent less than the record 7.1 billion pounds utilized last year and is 5 percent below the 1974 crop. Virtually all major producing areas expect some decline from a year ago. The Eastern and Central States will be off by 19 and 28 percent, respectively, while the West expects only a 1 percent reduction.

Red Delicious continues a long history as the leading apple variety, accounting for 38 percent (2.3 billion pounds) of the U.S. total. Other leading varieties and their percent of expected 1976 total production are: Golden Delicious, 16 percent; Rome Beauty, 8 percent; McIntosh, 8 percent; Jonathan, 5 percent; and Stayman, 3 percent. Together, these six varieties account for 78 percent (4.8 billion pounds) of the total U.S. production.

Production declines from 1975 are expected for every variety except Gravenstein and Yellow Newtown. The largest forecast reductions from 1975 are in store for York Imperial, down 50 percent; R. I. Greening, 49 percent; Stayman, 37 percent; McIntosh, 29 percent; Jonathan, 28 percent; Cortland, 25 percent; and Winesap, off 23 percent.
